

1. Team Number: 3
2. Team name: Tumblers
3. Team members:
 - a. Margaret Schneider
 - b. Maya Hernandez-Diaz
 - c. Summer Smith
 - d. Jackson Erb
4. Application name: Tumble Stack
5. Application description:

A social media based journaling application for college students in which users can create and customize their own profiles. Each day the user can log in and will be presented with a choice of three prompts that they can answer and will be stored and can be viewed alongside other users of the application. The application also allows users to pick a topic, and will be given a prompt based on that, to add to their own personal journal, and choose to share their journal or not.

The user will log in and be presented with a choice of three prompts that they can choose from and answer, before they are allowed to go any further into the application. Upon answering, they will be able to see other people's responses to the daily prompts (either anonymous or not) and like the post. The user will be able to make and customize their own profile, and this will extend into being able to add friends and see their profiles. The application will also have a part that lets you have your own personal journal, where you can pick a topic and answer a prompt based on that topic, and then choose to share the answer to your friends or keep it private.

6. Audience:

The target audience for our application is college students who want to get into journaling but don't know where to begin, how to do it consistently, or don't have an easy accessible place to do so. Because most college students are familiar with social media, it should be intuitive to use.

7. Vision Statement: For busy college students who need time to reflect and want an easy way to do it.

10. Communication Plan: In terms of communication, we plan to use discord and meetings over zoom.

11. Meeting Plan: Team meeting: Tuesday at 3:30 pm over zoom.

Weekly meeting with TA: Wednesday at 11:15 am over zoom.

Extra Credit:

1. Data Privacy and Security

If the app's security isn't strong, private journals or user info could get leaked. We'll use encryption, secure logins, and regular security checks to keep user data safe.

2. Low User Engagement

Students might stop using the app if it gets boring or feels repetitive. We'll add fun features to keep users interested.

3. Inappropriate Content

Some users might post rude or harmful things in their journal responses. We'll use filters, reporting tools, and clear community rules to keep the space positive.

4. Technical Problems

The app could crash, run slowly, or lose data if there are technical issues. We'll test carefully, back up data, and fix problems quickly to keep it running smoothly.

5. Project Delays

The team might fall behind schedule or try to add too many features. We'll focus on the main goals first and meet regularly to stay on track.
